

Sciex opens Echo MS Centre of Excellence in US

24 May 2023 | News

To help shape the workflows that allow the customers to overcome their most pressing challenges

Sciex, a global leader in life science analytical technologies, recently celebrated the opening of the Echo MS Centre of Excellence in the US. The centre builds on the Sciex culture of innovation and features a world-class demonstration laboratory that will serve as a portal to building strategic customer collaborations.

The centre is outfitted with two automation solutions, each coupled to their own Sciex Echo MS (mass spectrometry) system. This combined offering aims to showcase comprehensive and customisable workflows for high-throughput screening, HT-ADME and synthetic biology studies.

Through this dynamic and interactive showroom, the company will partner with clients to discover their unmet needs and deliver high-value answers for their most important workflows, thus creating a culture of knowledge, interactive support and growth.
