Sino Biological announces opening of new US-based Center for Bioprocessing

October 9, 2023 | News

Specialising in contract research services including custom recombinant protein and recombinant antibody development and manufacture

Sino Biological, Inc. which provides biological research reagents and related technical contract research services, has announced the formal opening of its new Center for Bioprocessing (C4B) in Houston, Texas USA at Levit Green, adjacent to the world-renowned Texas Medical Center.

Headquartered in Beijing, China, Sino Biological is the world's leading provider of mammalian cell-based recombinant proteins, antibodies, and related contract research services. Referred to as the Center for Bioprocessing (C4B), the new center will specialise in contract research services including custom recombinant protein and recombinant antibody development and manufacture.

Dr Yingmin Zhu, Head of the new C4B stated, "With the establishment of our new Center for Bioprocessing here in Houston, we are excited to mark a significant milestone in Sino Biological's global presence. We look forward to partnering with researchers and industry leaders worldwide to forge a brighter future in the life sciences."

"The C4B represents Sino Biological's natural global expansion of its contract research services capabilities and extends upon the company's already strong CRO service offering at its Beijing headquarters. The focus of this new center will be on the development and production of research- and diagnostic-grade proteins and antibodies utilizing mammalian cells, which possess the unique machinery to yield natural, in vivo-like products with high bioactivity," stated Dr Rob Burgess, Chief Business Officer for Sino Biological.
