

Zydus & Guardant Health promote use of next-gen genomic tests for advanced solid cancers in India and Nepal

03 November 2023 | News

Precision oncology next-generation sequencing tests help oncologists start patients on the best targeted treatment option

Indian firm Zydus Lifesciences and US-based Guardant Health have signed a co-marketing agreement to jointly promote the Guardant360 portfolio of liquid and tissue biopsy tests across India and Nepal.

The tests to be promoted include the Guardant360 and Guardant360 TissueNext tests for comprehensive genomic profiling and the Guardant360 Response test for monitoring response to treatment.

The agreement demonstrates a shared commitment to advance precision medicine and improve patient outcomes in the region. By combining resources and expertise, both organisations aim to empower oncologists with the necessary tools to help inform treatment decisions for patients with advanced cancer.

Guardant360 is a minimally invasive liquid biopsy test that provides comprehensive genomic profiling (CGP) of all solid tumours by analysing circulating tumour DNA (ctDNA) from a simple blood draw. Guardant360 TissueNext provides CGP results from a tumour tissue biopsy to give doctors actionable information when tissue testing is appropriate. Guardant360 Response is a monitoring test that allows oncologists to track a patient's treatment response over time.

“Cancer is a major public health problem in India and Nepal, with one out of nine Indians likely to develop cancer in his or her lifetime and more than 20,000 people in Nepal diagnosed with cancer every year,” said Simranjit Singh, Chief Executive Officer of Guardant Health Asia, Middle East and Africa.
