

China-based Meihua International unveils AI-powered medical device logistics platform

20 November 2023 | News

The first edition of Speed Fox is scheduled for launch in mid-2024

Meihua International Medical Technologies Co. (MHUA), a manufacturer and provider of Class I, II and III disposable medical devices with operating subsidiaries in China, has announced the upcoming launch of Speed Fox, an innovative artificial intelligence (AI)-powered warehouse management and medical device logistics platform.

Developed in collaboration with a team from a well-known higher education institution in China, MHUA believes that Speed Fox represents a strategic move to diversify its business and revolutionise the field of medical device logistics.

Under the banner of innovation, MHUA launched the Speed Fox programme earlier this year, leveraging the cutting-edge capabilities of the ChatGPT tool. In close collaboration with the institution's team, MHUA has intricately crafted an advanced AI health services platform that is designed to revolutionise warehouse management operations and elevate user interaction and experience.

Beyond its operational excellence, Speed Fox is also designed to serve as an intelligent interface for clients and healthcare professionals. Users can effortlessly access information about the medical devices, track their orders, and receive expert guidance on product usage. Driven by advanced ChatGPT language understanding, the platform will help ensure accurate responses to user queries, delivering a seamless and personalised customer experience.

MHUA anticipates that the adaptive ChatGPT learning capabilities of Speed Fox will enable the platform to stay at the forefront of the ever-evolving landscape of medical device logistics.
