

Quantum-Si introduces world's first next-generation protein sequencer in Japan

19 January 2024 | News

Providing researchers in Japan access to state-of-the-art technology for next-generation protein sequencing

US-based Quantum-Si Incorporated (QSI), The Protein Sequencing Company, has entered into an agreement with a new distributor who will make the company's protein sequencing instrument, Platinum available for the first time in Japan.

TOMY Digital Biology Co., a renowned importer and distributor with a rich history dating back to the 1950s, will distribute Quantum-Si's next-generation protein sequencer and associated consumables throughout Japan.

TOMY Digital Biology's commitment to delivering cutting-edge solutions and its alignment with Quantum-Si's vision for scientific innovation make this a significant step forward in providing researchers in Japan access to state-of-the-art technology for next-generation protein sequencing.

Quantum-Si is focused on revolutionising the growing field of proteomics. The company's suite of technologies is powered by a first-of-its-kind semiconductor chip designed to enable next-generation single-molecule protein sequencing and digitize proteomic research in order to advance drug discovery and diagnostics.
