

Clarius Mobile Health launches wireless ultrasound scanner in Australia

25 January 2024 | News

Popularity of the Clarius PAL in the United States affirms there's a strong market for a premium ultrasound scanner

Canada-based Clarius Mobile Health has announced that its revolutionary Clarius PAL HD3 wireless handheld whole-body ultrasound scanner is now available in Australia. Uniquely combining phased and linear arrays on a single head, Clarius PAL HD3 offers superior image quality of superficial and deep anatomy at the bedside.

Clarius is as compact as an iPhone and works seamlessly with iOS or Android devices, ensuring easy mobility from patient to patient. Clarius PAL HD3 is the only whole-body handheld scanner to deliver high-resolution images from the skin down to 40cm of depth, without the need to swap devices or transport bulky systems between rooms. It's the 11th wireless handheld ultrasound scanner in the Clarius specialty ultrasound lineup.

Clarius ultrasound scanners are proven to deliver superior image quality, built with the same advanced 8 beamformer processing technology used by higher-end traditional systems. With high frame rates for sharper images for deep imaging and stunning details at higher frequencies, Clarius provides clear and detailed imaging to guide safe procedures and support precise and rapid patient assessments.
