

Koning Health achieves UAE regulatory clearance for Breast CT commercialisation

29 February 2024 | News

First company to introduce breast CT technology in the UAE

Koning Health, a US-based medical imaging company, has received regulatory clearance from the Federal Authority for Nuclear Regulation (FANR) in the United Arab Emirates (UAE), marking a significant milestone in the company's expansion and its commitment to global health innovation.

Maher Bannourah, Director of Koning International, led the initiative by leveraging his industry experience with Ministry of Health (MOH) representatives.

This regulatory approval positions Koning as the first company to introduce breast CT technology in the UAE, setting a new standard in breast imaging and care in the region.

The inaugural installation of the Vera Complete, Koning's flagship breast CT system, is scheduled at a premier hospital site in the UAE as soon as April of this year. Introducing a no compression, high resolution breast imaging technology to the women of the UAE illustrates the commitment to provide women the highest level of medical technology available today.

This installation is not only a milestone for Koning but also serves as a cornerstone for the company's expansion throughout the Middle East and Africa (MEA) region. The project is expected to significantly boost sales and enhance access to innovative breast imaging solutions across the region.
