

Korea-based Medit unveils next evolution of Intraoral Scanners

09 April 2024 | News

Discovering the latest cutting-edge dental technology

South Korea-based Medit, a leading provider of dental 3D scanners and digital dentistry solutions, has announced the next evolution of intraoral scanning technology with the launch of Medit i900.

The Medit i900 features an innovative new control interface, faster, smoother scanning, improved ergonomics, and enhanced material capture technology. It enhances user-friendliness while offering more precision and control.

Medit disrupted the market in 2018 with its first intraoral scanner, the i500, offering dentists a high-precision, user-friendly option at a significantly lower cost than competitors.

Building on this success, Medit introduced the best-selling i700 in 2021, followed by the i700 Wireless and i600 in 2022, providing a comprehensive range of scanners for all types of dental practices.

The Medit i900 will also include the company's Medit Link platform, which offers free dental apps that boost productivity and streamline workflows. Medit Link seamlessly integrates with other platforms, services, and hardware.

The company has representatives in the Americas and Europe and boasts a global network of distributors in over 100 countries.
