

Augnito and Cloud Solutions partner to deliver AI-powered healthcare in Middle East

09 April 2024 | News

Significantly improving the efficiency, accuracy, and accessibility of healthcare services

India-based medical voice AI innovator Augnito made a momentous announcement during the prestigious LEAP 2024 technology conference. The company has established a pioneering partnership with Cloud Solutions, an industry-leader in digital transformation in the Middle East.

This groundbreaking collaboration holds immense potential to revolutionise the healthcare landscape by significantly improving the efficiency, accuracy, and accessibility of healthcare services for patients and providers alike.

According to Abdulelah AlMayman, CEO of Cloud Solutions, "Both entities envision an impact far beyond individual healthcare providers – we see a future in which there is a fully interoperable regional electronic health record (EHR) system in The Kingdom of Saudi Arabia. This partnership is a crucial stepping-stone towards this goal."

Augnito's track record showcases how Clinical Voice AI softwares are already automating and streamlining administrative tasks to enable faster turnaround times (saving over 3 hours per day for doctors). The company's products also ensure accuracy, smoother workflows, improved productivity, and resource optimisation. In fact, Augnito's recent integration with one of the largest hospital chains in Asia highlighted a staggering 21x return on investment, achieved in just 6 months.

Augnito is a supporter of The Kingdom's Vision 2030 roadmap and hopes to create significant and ongoing impact in the Middle East. The company has also partnered with Prime Hospitals, RAK Hospitals, King's College Hospital London (Dubai), and ATTIEH Medico in the region.
