Korean startup Medit unveils mobile app to revolutionise digital dental workflows

December 24, 2024 | News

Users can quickly view 3D scan data, which helps reduce errors and improve outcomes

South Korea-based startup Medit has launched a mobile app, MEDIT M. This much-anticipated release addresses key features requested by dental professionals and aims to improve collaboration and efficiency between clinics and labs.

Key Features

- **Real-Time Notifications**: Stay updated on new orders, status changes, and partnership requests.
- **Mobile Case Management**: Access patient details and 3D scan data anytime, anywhere.
- **Easy Communication**: Chat with partners to discuss case specifics, schedules, and scan quality.

MEDIT M simplifies digital dentistry by enabling real-time collaboration and seamless workflows for dental professionals. With its user-friendly interface, the app is designed to meet the specific needs of the industry.

It enhances workflow efficiency and convenience by providing instant notifications and chat features for fast, effective communication. Fully integrated with Medit Link, the app offers mobile access to patient and case data.

Users can quickly view 3D scan data, which helps reduce errors and improve outcomes. Additionally, the app streamlines workflows, saving time by eliminating unnecessary steps and boosting overall productivity.
