Pharmanovia signs in-licensing deal for novel osteoporosis treatment with Radius Health across key markets in APAC

January 5, 2025 | News

Deal expands Pharmanovia's osteoporosis franchise adding a novel bone formation agent

Pharmanovia, a global pharmaceutical company that commercialises novel medicines and revitalises, extends and expands the lifecycle of established medicines, has announced an exclusive in-licensing agreement with Radius Health, Inc for osteoporosis treatment, abaloparatide, which is marketed in the US as TYMLOS.

Under the terms of the agreement Pharmanovia will be responsible for clinical, regulatory and commercial activities across key markets in the Asia Pacific (APAC) region, specifically China, Singapore, Thailand, Indonesia, Vietnam, Taiwan, Hong Kong, Malaysia, Macau and the Philippines.

Abaloparatide is a human parathyroid hormone related peptide analogue indicated by the FDA for the treatment of postmenopausal women with osteoporosis at high risk for fracture or patients who have failed or are intolerant to other available osteoporosis therapy. Abaloparatide is also indicated to increase bone density in men with osteoporosis at high risk for fracture or patients who have failed or are intolerant to other available osteoporosis therapy.

James Burt, CEO, Pharmanovia said, “This deal recognises the strength of our commercial model in APAC, and China in particular, where we have one of the leading osteoporosis commercial platforms. With Tymlos, we will serve a broader patient population, providing osteoporosis solutions in the high, medium and low risk categories, further addressing unmet needs and meeting bone health challenges.”
