Lunit expands partnership with Saudi Arabia's largest medical group to deploy AI chest X-ray solution

March 7, 2025 | News

Lunit secures a second contract with Dr. Sulaiman Al Habib Medical Group

South Korea-based startup Lunit, a leading provider of artificial intelligence (AI)-powered solutions for cancer diagnostics and therapeutics, has announced a second agreement with Cloud Solutions, a subsidiary of Dr. Sulaiman Al Habib Medical Group (HMG), Saudi Arabia's largest medical organisation.

Building on the success of their 2023 collaboration, Lunit will now supply its AI-powered chest X-ray analysis solution, Lunit INSIGHT CXR, to the Kingdom of Saudi Arabia for the next three years, analysing approximately 1 million chest X-ray images.

This latest contract expands on Lunit's initial partnership with HMG, which introduced Lunit INSIGHT MMG to support breast cancer screening across the Kingdom. With Lunit INSIGHT CXR, the collaboration aims to enhance diagnostic precision and efficiency in detecting critical chest abnormalities, including lung cancer, tuberculosis, and pneumonia.

Lunit INSIGHT CXR leverages advanced AI technology to detect chest abnormalities with high accuracy, enabling faster, more precise diagnoses and optimised clinical workflows. Its deployment aligns with Saudi Arabia's Vision 2030 initiative, which emphasises healthcare innovation and digital transformation.
