

GE HealthCare expands invasive cardiology solutions portfolio with Altix AI.i

18 March 2025 | News

To enhance efficiency and precision care for multiple types of cardiac procedures

American medtech firm GE HealthCare has announced the launch of the Altix AI.i edition of Mac-Lab, CardioLab and ComboLab. The Altix AI.i editions are designed to improve the user experience, elevating workflow in the cardiac catheterisation (cath) lab and supporting even the most complex electrophysiology (EP) procedures. These latest editions offer new features that can streamline workflow and enhance interoperability, while upholding strong cybersecurity standards.

GE HealthCare will showcase the Altix AI.i edition of Mac-Lab, CardioLab and ComboLab at the European Heart Rhythm Association (EHRA) 2025 annual congress taking place on March 30 - April 1 in Vienna, Austria and Heart Rhythm Society (HRS) 2025 annual meeting on April 24 - April 27 in San Diego. Altix AI.i is available for order in the United States and will launch in global markets later this year.

“Altix AI.i is built on more than two decades of experience, leadership and innovation in invasive cardiology to enhance cath labs and EP procedures and empower clinicians to deliver the best possible outcomes,” said Jyoti Gera, CEO, CardioVascular & Interventional Solutions, GE HealthCare. “By automating routine tasks and streamlining workflow, Altix AI.i allows clinicians to focus on what truly matters – providing exceptional patient care.”
