

China's Henlius inks \$301 M deal with Sandoz for proposed Ipilimumab biosimilar

02 May 2025 | News

Partnership covers North America, Europe, Japan, and Australia to accelerate global access of HLX13 in immuno-oncology combinations

Shanghai Henlius Biotech, Inc. announced a licensing agreement with Sandoz, the global leader in generic and biosimilar medicines, granting exclusive commercialisation rights for its self-developed ipilimumab biosimilar HLX13 in the United States, 42 European countries and regions, Japan, Canada, and Australia.

Under the agreement, Henlius will be responsible for development, manufacturing and commercial supply of HLX13, and is eligible to receive up to a total of \$301 million, including a \$31 million upfront and additional milestone payments.

As the global leader in generic and biosimilar medicines, Sandoz is committed to its purpose of "pioneering access for patients" and has benefited over 900 million patients worldwide with approximately 1,300 products. This collaboration will leverage Sandoz's established global network and commercialization expertise to accelerate the accessibility of HLX13 in mainstream biopharma markets.

HLX13 is a key component of Henlius' self-developed biosimilar pipeline. Its reference product, Yervoy[®], the world's first CTLA-4 inhibitor, has been approved in various countries and regions in combination with nivolumab for the treatment of melanoma and hepatocellular carcinoma, among other indications. Henlius has established an integrated global platform for R&D, regulatory registration, and clinical operations, backed by a manufacturing and quality management system that meets global regulatory standards.

The company has successfully launched four products in markets beyond China. Henlius is committed to advancing the global development of HLX13 and working with partners to provide more high-quality, affordable treatment options for patients worldwide.
