Dubai's Mohammed Bin Rashid University of Medicine and Health Sciences introduces new nursing education programmes

December 22, 2025 | News

To advance medical education and align with global standards in this vital field

Mohammed Bin Rashid University of Medicine and Health Sciences (MBRU), the learning and discovery arm of Dubai Health, has introduced new nursing education programmes through the Hind Bint Maktoum College of Nursing and Midwifery (HBMCoNM). The expansion aims to advance medical education and align with global standards in this vital field.

MBRU's nursing education pathways now span from undergraduate study to specialized academic training, beginning with the newly introduced Bachelor of Science in Nursing (BSN).

Building on this foundation, students can specialise through a Master's, Postgraduate Diploma, or Postgraduate Certificate in four fields: Cardiovascular Nursing, Critical Care Nursing, Emergency Care Nursing, and Paediatric Nursing. Together, these offerings provide a comprehensive academic route for nurses seeking to build advanced clinical expertise.

In addition to the academic offerings at HBMCoNM, the College of Medicine at MBRU continues to offer a range of advanced academic degrees, including a six-year undergraduate Doctor of Medicine programme, a four-year undergraduate Graduate Entry Doctor of Medicine programme, a Master of Science and PhD in Biomedical Sciences, and a Master's and Postgraduate Diploma in Health Professions Education. The Hamdan Bin Mohammed College of Dental Medicine offers five postgraduate programmes in Endodontics, Prosthodontics, Periodontology, Pediatric Dentistry, and Orthodontics.
