Cambridge Health Group advances specialised neurological rehabilitation in UAE

February 2, 2026 | News

Ensuring consistent clinical standards, knowledge transfer, and long-term patient benefit

Cambridge Health Group, the GCC's leading provider of post-acute care, has renewed its long-standing partnership with the International Clinic of Medical Rehabilitation (ICMR) and Kozyavkin's Medical Technologies (KMT) reaffirming a shared commitment to advancing specialized neurological rehabilitation across the United Arab Emirates (UAE).

The affiliation between Cambridge and the Kozyavkin team began in late 2017, when the programme was first introduced at Cambridge Medical & Rehabilitation Center's Al Ain facility. Since its inception, more than 1,000 unique patients have benefited from the Kozyavkin Method across Cambridge Health Group facilities, reflecting the scale, continuity, and long-term impact of this collaboration on children and families requiring specialised neurological rehabilitation.

Through this renewed collaboration under Cambridge Health Group's leadership, the Kozyavkin Method continues to be embedded within structured, accredited rehabilitation pathways, ensuring consistent clinical standards, knowledge transfer, and long-term patient benefit across the UAE.

The partnership forms a key component of Cambridge Health Group's regional strategy to deliver specialized rehabilitation services at scale across the Gulf, aligned with the GCC's vision for healthcare excellence and innovation. Cambridge Health Group holds JCI and CARF accreditations, including the highest number of CARF accreditations for rehabilitation programs in the UAE and Kingdom of Saudi Arabia (KSA), with eight unique recognitions.
