London School of Business & Finance launches School of Health Sciences in Singapore

July 23, 2026 | News

Graduates will be well positioned for careers across healthcare services, biomedical research, pharmaceuticals, biotechnology

London School of Business & Finance (LSBF) Singapore Campus has announced the launch of its School of Health Sciences in 2026, marking a significant milestone in the institution's continued expansion into high-growth industries.

Developed in partnership with the University of Roehampton, London, the new school will deliver internationally recognised UK qualifications designed to prepare graduates for the rapidly evolving healthcare and biomedical sectors.

The launch introduces two undergraduate programmes:

- **Bachelor of Science (Honours) Biomedical and Health Sciences**
- **Bachelor of Science (Honours) Biomedical and Health Sciences (Top-Up)**

These programmes are supported by a comprehensive academic pathway beginning with Diploma and Higher Diploma in Biomedical Science, Healthcare and Social Care Management, giving students multiple entry routes and seamless progression towards a UK honours degree.

The launch comes at a time when Singapore continues to strengthen its position as a global biomedical and healthcare hub, creating increasing demand for skilled professionals in healthcare, life sciences, pharmaceuticals and biotechnology.

A distinctive feature of the partnership is the delivery of a full UK curriculum that has been thoughtfully adapted for the needs of learners in Asia. While maintaining the academic standards and quality assurance of the University of Roehampton, the programmes have been structured with an accelerated study pathway, enabling eligible students to complete their honours degree in 24 months—allowing them to graduate sooner without compromising academic quality.
