KPJ Healthcare and SingHealth mark strategic partnership to strengthen future healthcare capabilities

August 6, 2026 | News

Initial areas of collaboration include fellowships, specialist attachments and academic exchanges

KPJ Healthcare Berhad has marked the commencement of a strategic partnership with SingHealth, Singapore's largest and leading healthcare cluster, through the signing of a Memorandum of Understanding (MoU), establishing a long-term framework for collaboration in healthcare innovation, clinical research, education and medical simulation.

The partnership brings together KPJ Healthcare's nationwide network of specialist hospitals and Malaysia's first private Academic Health System, the KPJ Health System (KPJHS). Home to an integrated network of acute hospitals, community hospitals, national specialty centres and polyclinics delivering care across more than 40 clinical and surgical specialties, SingHealth is one of Asia's most respected academic healthcare clusters.

Built on complementary strengths and a shared commitment to clinical excellence, both organisations will work together to develop healthcare talent, advance research and innovation, strengthen specialist capabilities and promote the exchange of knowledge and best practices.

The MoU establishes a long-term framework for collaboration across these strategic areas: *Clinical Education and Workforce Development, Research and Innovation, Clinical Collaboration, Digital Health & AI* and *Knowledge Exchange.* Together, these areas will support the exchange of expertise, strengthen specialist capabilities, promote multidisciplinary collaboration and create new opportunities for innovation that benefit patients and healthcare professionals.

Initial areas of collaboration include fellowships, specialist attachments and academic exchanges, alongside collaborative research, scientific publications, conferences, healthcare leadership development, medical simulation and the co-management of complex clinical cases.
