

Medical Fair Asia 2026 brings Asia's healthcare ecosystem together in Singapore

August 10, 2026 | News

More than 1,000 exhibitors from 40 countries and regions will gather at Marina Bay Sands as Medical Fair Asia, Medical Manufacturing Asia and the inaugural RehaCare Asia connect medical innovation, manufacturing, healthcare delivery and rehabilitation in one regional platform

From medical manufacturing and AI-enabled healthcare to rehabilitation, assistive technology and independent living, the healthcare value chain will come together in Singapore this September as Medical Fair Asia 2026 returns from 9 to 11 September at Marina Bay Sands.

The 16th edition of Medical Fair Asia will be held alongside the 7th Medical Manufacturing Asia and the inaugural RehaCare Asia, creating a connected platform spanning the development and manufacture of medical technologies through to their use in healthcare environments, rehabilitation and longer-term care.

Across the three exhibitions, more than 1,000 exhibitors from 40 countries and regions will showcase over 10,000 products and solutions. More than 14,000 trade visitors are expected, with 17 national pavilions and country groups bringing international perspectives and technologies to Singapore.

For healthcare providers, procurement professionals, manufacturers, distributors, investors and innovators, the co-location creates opportunities to look beyond individual parts of the healthcare sector and understand how new technologies, manufacturing capabilities and changing models of care increasingly intersect.

"Innovation in healthcare begins long before a product reaches the patient. Medical Manufacturing Asia highlights the critical role that manufacturers, engineers and technology providers play in advancing healthcare innovation. Together with Medical Fair Asia and RehaCare Asia, the exhibition reflects the interconnected ecosystem that drives better healthcare outcomes across the region," said Lars Wismer, Managing Director, Messe Düsseldorf Asia.

Innovation across the healthcare journey

Medical Fair Asia will bring together innovations across medical technology, diagnostics, hospital equipment, digital health, artificial intelligence and connected care.

Among the new features for 2026 is the K-AI Medical Diagnostic Hub, which will demonstrate how AI can be integrated across the diagnostic journey. The experience brings together an AI Screening Centre, Smart Diagnostic Room and multi-vendor technologies to demonstrate applications from screening and diagnostics through to clinical decision-making.

The FTR4H Conference and Showcase will extend the conversation into digital health, AI, robotics, wearables, connected healthcare and emerging models of care, while LaunchPad Innovation will give new and emerging companies a platform to introduce solutions to healthcare and industry audiences.

Upstream, Medical Manufacturing Asia will focus on the technologies and capabilities behind the products used in healthcare, from components, materials and precision engineering to automation, production technologies and advanced manufacturing.

RehaCare Asia, making its Singapore debut this year, expands the ecosystem further into rehabilitation, mobility, assistive technology, accessibility, healthy ageing and independent living. Its introduction reflects growing attention across Asia to what happens beyond acute treatment, including recovery, ageing, community-based support and care at home.

Connecting innovation with implementation

A focus on real-world implementation will be strengthened by SingHealth, which joins Medical Fair Asia 2026 as its Healthcare Innovation Partner.

Through its participation in the exhibition and knowledge programme, SingHealth will bring healthcare practitioner perspectives into discussions around how new ideas and technologies can be tested, implemented and scaled within actual care environments.

The partnership will also create opportunities for healthcare professionals and industry to engage more directly, connecting clinical needs with the technologies, expertise and capabilities required to address them.

Associate Professor Goh Su-Yen, Group Director, Innovation & Transformation, SingHealth, said: "Innovation has the power to transform healthcare when it delivers meaningful improvements for patients, healthcare professionals and the wider healthcare system. As Healthcare Innovation Partner, we look forward to sharing our implementation experience and engaging with industry partners to help translate promising ideas into practical, scalable solutions."

SingHealth healthcare professionals will also contribute to the wider programme, including Paradigm Shifts in Healthcare, which will explore real-world applications of artificial intelligence, robotics, innovation and sustainability within Singapore's healthcare environment.

Beyond the exhibition floor

A series of conferences, workshops, forums and demonstrations across the three days will examine the issues influencing healthcare and MedTech across Asia.

The programme includes the FTR4H Conference, Medical Manufacturing Asia Conference, RehaCare Asia workshops and discussions, as well as the MotusAcademy × RehaCare Asia Leadership Forum, which will examine why promising rehabilitation technologies can struggle to move from pilot projects into routine care.

Visiting delegations from across Southeast Asia and beyond will add another dimension to the three days, alongside business matching and international country participation, creating opportunities for manufacturers, buyers, healthcare providers and distributors to build new regional connections.

Singapore as a meeting point for healthcare in Asia

The 2026 exhibitions also build on Messe Düsseldorf Asia's long-standing presence in Singapore. Established in Singapore in 1995, the company has organised Medical Fair Asia since 1997, developing the exhibition alongside the region's evolving healthcare and MedTech landscape.

Today, Singapore serves not only as the home of Medical Fair Asia but as a regional meeting point where international companies can connect with healthcare and industry stakeholders from markets across Southeast Asia.

As healthcare systems respond to ageing populations, workforce pressures, rapid technological change and growing demand for care beyond the hospital, Medical Fair Asia, Medical Manufacturing Asia and RehaCare Asia will provide a platform for the different parts of the ecosystem to meet, exchange perspectives and explore what comes next.

Medical Fair Asia 2026, Medical Manufacturing Asia 2026 and RehaCare Asia 2026 will take place from 9 to 11 September 2026 at Marina Bay Sands, Singapore. Visitor pre-registration is free.

For more information and registration, visit www.medicalfair-asia.com.

Event details

Medical Fair Asia, Medical Manufacturing Asia and RehaCare Asia 2026

Dates: 9 to 11 September 2026

Venue: Marina Bay Sands, Singapore

Opening hours:

9 and 10 September: 10.00am to 6.00pm

11 September: 10.00am to 5.00pm

Admission is complimentary for registered business and trade visitors.

Selected conferences, workshops and briefing sessions may require separate registration and are subject to availability.

For more information and visitor registration, visit www.medicalfair-asia.com.
