Fredna Dental Systems partners with South Koreaâ??s BIOTEM to launch dental implant technology in India

November 18, 2026 | News

Bringing international dental technologies to Indian dental professionals

Fredna Dental Systems (FDS) has introduced South Korean dental implant technology to the Indian dental fraternity through the launch of BIOTEM AR Dental Implant priced at Rs 3,333. The event marked a significant milestone in the Indian dental implantology landscape, bringing together approximately 500 dental professionals, implantologists, clinical experts and industry stakeholders for an evening dedicated to scientific exchange, technological exploration and professional networking. The event was also attended by *Kevin Yeo, International sales Director, Biotem Korea.*

One of the evening's key highlights was the spectacular unveiling of the BIOTEM AR Implant System and its range of prosthetic components, symbolising the beginning of a strategic partnership committed to advancing implant dentistry in India. The event also provided dental professionals with an opportunity to explore the product portfolio, interact with technical teams and understand the system's design and applications.

BIOTEAM AR’s introduction to India through FDS comes at a time when dental implant selection involves several considerations, including material composition, implant design, surface technology, clinical evidence, manufacturer credentials, patient suitability and cost.

With markets such as South Korea and Europe contributing to developments in implant manufacturing and surface engineering, access to international implant technologies provides Indian dental professionals with additional systems to evaluate against their clinical and patient requirements.
