Monash University Malaysia partners with Hospital Pasir Gudang towards excellence in wound care

November 27, 2026 | News

Wound care collaboration addresses a critical and growing public health burden

Monash University Malaysia is deepening its longstanding partnership with the Ministry of Health Malaysia (MoH) through a collaboration with Hospital Pasir Gudang (HPG) towards excellence in wound care, while expanding its contribution to the nation's healthcare system through clinical service delivery, medical education, professional training and research innovation.

The partnership aims to advance wound care services, clinical training and research at HPG, supporting the development of specialised expertise and improved management of complex wounds.

The initiative forms part of Monash University Malaysia's broader collaboration with MoH to strengthen public healthcare services, develop future health professionals and address Malaysia's evolving healthcare needs.

Building on its longstanding partnership with MoH, Monash University Malaysia, through its Jeffrey Cheah School of Medicine and Health Sciences, has expanded its clinical training network in Johor with the designation of the newly opened HPG as a second clinical training site for its Bachelor of Medical Science and Doctor of Medicine (MD) programme, complementing its existing placement at Hospital Sultanah Aminah Johor Bahru.

HPG will provide vital supervised clinical exposure and hands-on learning for the University’s medical students.

To further build specialised workforce capacity, Monash University Malaysia will launch Malaysia's first Master of Wound Care programme in July 2027.

The University is establishing the Monash Wound Innovation and Solutions Hub at its Subang Jaya campus, slated for completion in the third quarter of 2027.
