Aus disinfection technology gets Korea FDA nod

August 30, 2013 | News | By BioSpectrum Bureau

Singapore:Ã?Â The Korean Food and Drug Administration (KFDA) has approved Australia-based medical device firm Nanosonics' disinfection technology trophon EPR to be marketed in the country.Ã?ÂNanosonics recently appointed Cochlear senior executive Mr Michael Kavanagh as its CEO to drive its new stage of growth and expansion.

Ã?Â¢Ã¢â??Â¬Ã â??We are delighted to receive regulatory approval in South Korea, well ahead of schedule. South Korea is a strong and growing market for medical devices. The speed of approval is a testament to the quality of our Regulatory and Product Development teamsÃ?Â¢Ã¢â??Â¬Ã?Â• said Dr Ron Weinberger, president, technology development and commercialization, Nanosonics.

Ã?Â¢Ã¢â??Â¬Ã â??Expanding into new geographic markets will drive the next phase of market adoption of the trophon EPR as we continue the goal to see our technology accepted as the global standard of care. We are presently in discussions with potential partners for distribution. These discussions are progressing well and there is strong interest from a number of internationally recognised companies,Ã?Â¢Ã¢â??Â¬Ã?Â• he added.

Nanosonics has also filed for regulatory approval in Mexico and Japan.
