New pipette to reduce repetition and save time

April 24, 2013 | News | By BioSpectrum Bureau

Singapore: "Scientists working in liquid handling and sample preparation need pipettes they can trust," said Mr Raymond Mercier, business director, liquid transfer, Thermo Fisher Scientific.

According to the company's press release, this new electronic pipette is designed to maintain precise sample volumes on every channel with fewer repetitions and reproducible results for multiple application types.

"The Thermo Scientific E1-ClipTip electronic pipette's interlocking technology provides outstanding sample security and makes pipetting more efficient with the ability to transfer samples quickly between different labware formats using the same pipette throughout the protocol," added Mr Mercier.
