US firm opens photonics R&D centre in China

Singapore: US based Cambridge Technology (CTI) has launched its first research and development center in China to provide innovation in laser beam steering solutions in advanced industrial and medical applications.

Cambridge Technology provides photonics technical innovation paving way to significant advancements in medical ophthalmology and industrial processes.

"Expanding our footprint and technical resources with our new Suzhou development center will bring us closer to our customers, enable closer partnerships and facilitate rapid laser beam steering solutions in the China market," stated Mr Chris Tecca, division president and general manager of Cambridge Technology.
