

Edico Genome introduces Bio-IT Global Distribution Program

March 14, 2018 | News

Edico Genome has established numerous partnerships with distributors around the globe, including with organizations based in China, Taiwan, South Korea, Israel and Portugal

US based Edico Genome, the leading secondary analysis solution provider for next-generation sequencing (NGS), revealed its DRAGEN™ Global Distribution Partner Network, a new program broadening access to its DRAGEN Bio-IT Platform to markets around the world.

The Global Distribution Partner Network will provide new and existing DRAGEN customers with regionally focused technical and sales support, streamlining the purchase and implementation of DRAGEN.

Edico Genome has established numerous partnerships with distributors around the globe, including with organizations based in China, Taiwan, South Korea, Israel and Portugal. Agreements with additional partners across Europe, Asia and South America are being finalized.

Through this program, Edico Genome will equip distributors with the knowledge and materials needed to provide custom, localized support and purchasing assistance for DRAGEN customers.

Regional distributors will provide in-person customer support and guidance throughout all stages of the purchasing, integration and utilization of DRAGEN.

Leveraging field-programmable gate array (FPGA) technology, DRAGEN rapidly accelerates analysis of NGS data, completing analysis in as little as 20 minutes.

The DRAGEN platform is highly reconfigurable, enabling users to run DRAGEN's complete suite of pipelines, including Germline, Somatic, RNA and more, all from the same platform.

Edico Genome's dedicated staff of bioinformaticians, computer scientists and engineers continuously develops new algorithms and features pipelines designed to increase accuracy, speed and scalability. DRAGEN is available both onsite, in the Cloud and through a blended hybrid-cloud solution.
