Jeil Pharma unveils new research centre

May 16, 2018 | News

The new research centre is part of the company's plans to strengthen investment in the R&D sector.

Jeil Pharmaceutical has recently opened a new technology research centre in Yongin, Gyeonggi Province.

The new research centre is part of the company’s plans to strengthen investment in the R&D sector and enhance the development of new drugs and generics.

The new centre, dedicated to formulation research, has reorganized the existing pharmaceutical and analytical laboratory at Baekam Central Research Laboratory. The company completed the transfer of workforce and equipment last month.

The company expects that the new R&D facility will accelerate the development of new drugs and generic treatments against diabetic, hyperlipidemia, hypertension, benign prostatic hyperplasia and smoking cessation by using advanced technology such as fluidized bed granulator and pellet coating.
