

Shuwen gets recognition as International cooperation base for med tech

October 24, 2019 | News

Shuwen Biotech designated as an International Cooperation Base for Novel Biomarkers and Innovative Diagnostic Technologies by authorities in Zhejiang Province, China

Shuwen Biotech, a China-based leader in innovative diagnostics, announced that it has been designated as an International Cooperation Base for Novel Biomarkers and Innovative Diagnostic Technologies by authorities in Zhejiang Province, China.

The designation was based on the recognition of Shuwen's capabilities, infrastructures and accomplishments in development and commercialization of innovative medical diagnostic products through licensing and international collaborations.

Based in China, Shuwen Biotech has built a world-leading, innovative diagnostic-technology transformation platform. Through its own innovations as well as licensing and collaborative development, Shuwen commercializes the latest scientific and technological advances in medical diagnostics, especially novel biomarkers. To date, Shuwen has licensing and collaboration agreements with fifteen leading European and American universities and companies, and has developed and/or commercialized a number of innovative diagnostic products under such agreements. Of note, Shuwen's novel first in its kind Point-of-Care Preeclampsia Detection Kit, based on technologies licensed from a leading US university and developed in-house, has been certified by the European Union and is being promoted globally.

"We are honored by this recognition. We will continue to expand on international cooperation and licensing, and focus on commercializing international diagnostic innovation to benefit health," commented Jay Z. Zhang, Chairman and CEO of Shuwen.
