Pelican BioThermal launches service offerings for pharma packaging solutions

June 2, 2021 | News

New conditioning options are currently available at worldwide locations for single-use temperature-controlled shippers

Temperature-controlled packaging solutions provider Pelican BioThermal, has announced new service offerings that support customers who use single-use products, such as CoolPall Flex single-use bulk shippers and CoolGuard Advance single-use parcel shippers. The company now offers the option to condition BRIC coolants for single-use products at locations worldwide.

“Over the past several years, we’ve worked to expand our presence across the globe to make our services more accessible to our customers,” said David Williams, President, Pelican BioThermal. “Yet not all of our customers could benefit from our global network. We’re excited to extend services to our single-use packaging customers, allowing them to focus on their core business--developing pharmaceutical products.”

Pelican BioThermal is known for its ability to condition and deliver ready-to-use reusable products worldwide. This service helps customers who do not have the facilities, equipment or staff to condition their temperature-controlled packaging. Some customers of single-use packaging have the same needs, which is why the company is expanding its offerings to support this segment.

Strategically placed in pharma hubs and high-traffic shipping lanes across the globe, Pelican BioThermal’s network includes more than 80 locations. The company’s service centres and network stations refurbish, repair and condition a variety of reusable temperature-controlled packaging.
