DrAnsay.com offers online doctor's certificates for antigen self-tests

July 8, 2021 | News

The test certificate is available in 14 languages as a PDF file 24/7 after verification by an online doctor

DrAnsay.com, the market leader for online doctor attests, is offering online test certificates for self-applied rapid antigen tests worldwide to avoid the effort, infection risk and cost of point-of-care testing.

To obtain a test certificate online, the user first needs a standard antigen rapid self-test, which he performs himself at any time at any location. After ten minutes, the user sees the test result and answers the questionnaire at www.DrAnsay.com at any time. Within three minutes he will receive the test certificate in 14 languages as a PDF file 24/7 after verification by an online doctor.

The test certificate fulfills all requirements for travelling to Germany, the US, the UK, Spain, Italy, Turkey, France etc., if the user does not have a vaccination or immunity passport. Especially for the US, the legally validated test certificate also contains the necessary medical confirmation that the user has no symptoms and is fit to fly.

"In times of Corona, safe travel, work, school etc. for all citizens worldwide is only possible with mass rapid antigen testing. Only our efficient online service now quickly and easily allows millions of doctors' certificates of such self-applied tests worldwide," said lawyer and CEO, Dr jur Can Ansay.

The service complements the world's first online COVID-19 'Immunity Passport' for recovered persons, which was launched on June 18, 2020.
