New study: How interoperability improves the patient and provider experience

Read now

Information sharing builds stronger relationships between stakeholders across healthcare. Organizations can better connect with their partners—providers, payors, and patients—when interoperability solutions facilitate the sharing of crucial information, from medications and transition of care to preventive care and health education.

To better understand the overall industry challenges of interoperability for providers and payors, AWS Marketplace commissioned a survey of industry stakeholders which yielded over 100 responses from director-level or above positions at payor and provider organizations.

Read this ebook to gain insights into the current state of interoperability solutions and how the ability of health information exchanges can improve the patient and provider experience for your organization.

About AWS Marketplace:

AWS Marketplace is a digital software catalog that makes it easy to find, buy, deploy, and manage software that runs on AWS. AWS Marketplace includes thousands of listings offered by independent software vendors, spanning popular categories such as security, networking, storage, machine learning, business intelligence, database, and DevOps. These products can be integrated with AWS services and other existing technologies, enabling you to effectively migrate and operate your business in the cloud. Visit aws.amazon.com/marketplace to learn more.
