Bhayangkara Kediri Hospital launches new DNA testing services in Indonesia

December 24, 2024 | News

Inauguration of MRI facility and health service initiative at Bhayangkara Kediri Hospital

Bhayangkara Kediri Hospital has inaugurated its new MRI service building and laid the cornerstone for a new service facility, marking a significant step forward in enhancing healthcare services in Kediri and surrounding areas.

One of the key moments of the inauguration was the announcement of a strategic collaboration between Bhayangkara Kediri Hospital and Regene Genomics, the most comprehensive DNA testing service provider in Indonesia, developed by local talent.

This collaboration aims to provide DNA and genomic testing services that can enhance lifestyles, improve diagnostic accuracy, support health planning, and aid in disease prevention for individuals, aligned with precision medicine.

Regene Genomics is a DNA and genomic testing service provider developed by Indonesian talent, and recognised as the most comprehensive in Indonesia. Leveraging the latest Microarray Illumina technology, Regene offers a variety of benefits, including:

- **Nutrition and Diet**: Customising diets and nutritional plans based on genetic profiles.
- **Cancer and Infections**: Identifying future risks of cancer and infections.
- **Dermatology**: Enhancing beauty clinic capabilities with DNA-based precision skin health solutions.
- **General Diseases**: Detecting risks of critical diseases early, such as diabetes and heart disease.
- **Mental Health**: Analyzing genetic factors influencing stress, fitness, and lifestyle.
- **Talents and Abilities**: Helping parents understand their children's potential to support optimal talent development.
