Predictmedix AI and Pacific Mechatronics join hands to scale AI health screening across APAC defence sector

May 21, 2025 | News

For procurement pipelines of some of Asia's most influential defence programmes

Canada-headquartered Predictmedix AI Inc. has announced a high-impact strategic alliance with India-based Pacific Mechatronics, a premier systems integrator with deep-rooted access to Asia-Pacific's defence, aerospace, and national security ecosystems. This collaboration marks a major commercialisation milestone, launching Predictmedix's artificial intelligence (AI)-driven Smart Health Stations into one of the world's fastest-growing defence markets.

This partnership positions Predictmedix AI for immediate and scalable revenue opportunities across key Asia-Pacific regions including Singapore, Indonesia, Malaysia, the Philippines, and Vietnam, where defence and border agencies are rapidly modernising operational health protocols.

Predictmedix's Smart Health AI Stations offer a fully automated, contactless health screening solution that uses AI and multispectral imaging to detect signs of fatigue, infectious diseases, cognitive impairment, and mental health anomalies, in seconds. Built for rugged, high-security use cases, the solution is primed for deployment at border control zones, military installations, naval docks, and air command units.

Pacific Mechatronics, known for delivering complex automation, surveillance, and electronics solutions to defence ministries and aerospace primes, will lead the deployment, integration, and ongoing support of Predictmedix's Smart Health AI Stations. This not only ensures seamless execution but also embeds Predictmedix directly into the procurement pipelines of some of Asia's most influential defence programmes.
