Teoxane opens first APAC regional academy for medical education in Bangkok

January 14, 2026 | News

First programme introduces Teoxane's latest innovation for skin quality

Teoxane opens its first APAC Regional Academy in Bangkok, Thailand this January, expanding its global medical-education network. Located on Level 12 of One Bangkok Tower 4, the hub offers a modern environment designed to support high-quality clinical training.

Purpose-built as a regional center of excellence, the Academy will upskill licensed aesthetic practitioners through science-based education, hands-on technique, and expert exchange, reinforcing Teoxane's long-term collaboration with KOLs and clinicians across Asia-Pacific (APAC) — one of the fastest-growing aesthetics markets.

Developed with international experts, the Academy will deliver evidence-based curricula, including the MLT 3.1® injection approach and ATP™ methodology for personalised aesthetic assessment.

The first programme introduces Teoxane's latest innovation for skin quality - Teoxane babyGLOW™, led by Dr Silvia Caboni, one of the expert injectors behind the methodology. Following a soft launch in Spain (Q4 2025), early feedback from European practitioners has been strongly positive, highlighting not only strong science, but also treatment designed for modern lifestyles – fast, low-maintenance, comfortable, with an immediate glow and minimal downtime.

The Academy will offer tailored development pathways to advance both the science and artistry of aesthetic practice, supported by Teoxane's HA-based portfolio and two decades of scientific leadership.
