Genedant Capital and SingHealth partner to boost healthcare startups in Singapore

March 19, 2026 | News

Aims to identify, evaluate, and support the formation of high-quality healthcare startups, focused on novel and validated technologies

Genedant Capital Pte. Ltd. and SingHealth, Singapore's largest public healthcare group, signed a Memorandum of Understanding (MOU) to explore strategic collaboration opportunities aimed at translating clinical innovations into scalable healthcare ventures that will benefit patients across the region.

The collaboration brings together SingHealth's world-class clinical expertise, cutting-edge research capabilities, and robust intellectual property portfolio with Genedant's early-stage venture capital, venture-building, and operational capabilities.

Together, the parties will seek to identify, evaluate, and support the formation of high-quality healthcare startups, focused on novel and validated technologies. Genedant will provide investment capital, operational support and access to a global network of industry partners, talent, and co-investors to augment the SingHealth Technology Incubator (SCOUT)'s pipeline of clinical research and innovation projects.

The partnership is expected to provide an institutional pathway to accelerate scientific translation and commercialisation of impactful technologies emerging from SingHealth's ecosystem. This engagement with SingHealth reflects Genedant's continued expansion of its venture capital platform in deep technology, particularly at the intersection of healthcare, advanced science, and commercialisation.

"This collaboration strengthens our ability to originate differentiated opportunities and remain close to emerging healthcare innovation in Singapore, one of Asia's leading deep tech hubs", said Quek How Jiang, CEO of Genedant.

"Our partnership with SingHealth reinforces our investment approach, strengthens our multi-stage venture platform, and supports Singapore's continued growth as a global hub for healthcare startups."

The partnership positions both organisations to accelerate the development of healthcare solutions that can improve patient outcomes while establishing Singapore as a global centre for healthcare innovation.
