Provation launches cloud-based GI procedure documentation platform in Australia & New Zealand

July 14, 2026 | News

Bringing advanced workflow efficiency, standardised reporting and enhanced clinical productivity to hospitals

As gastroenterology providers across Australia and New Zealand face growing patient demand and increasing documentation requirements, every minute saved can make a meaningful difference. Provation, a leading provider of clinical productivity software, has announced the immediate availability of Provation® Apex, a cloud-based GI procedure documentation platform designed to help gastroenterologists reclaim more than 10 minutes per procedure through efficient workflow management and reporting.

Provation Apex helps gastroenterologists and endoscopy teams accelerate documentation workflows, improve reporting consistency and support high-quality patient care through a modern, intuitive user experience. The platform combines structured clinical documentation, streamlined workflows, and cloud-based accessibility to help organisations reduce administrative burden and enhance operational efficiency.

Built specifically for gastroenterology practices and endoscopy centres, Provation Apex leverages decades of specialty expertise to support efficient procedure documentation, standardised clinical reporting and streamlined workflows throughout the care continuum.

Designed as a cloud-native platform, Provation Apex enables healthcare organisations to benefit from ongoing innovation without the challenges associated with traditional software deployments.
