Max Healthcare and Clemenceau Hospital Dubai bring specialist consultations and surgical expertise in the UAE

November 23, 2026 | News

To create opportunities for a deeper clinical partnership

Max Healthcare and Clemenceau Medical Center Hospital, Dubai (CMC, Dubai) have signed a collaboration agreement to strengthen access to specialised medical care for patients in the UAE.

Under the partnership, doctors from Max Healthcare will visit CMC, Dubai to conduct outpatient department (OPD) consultations and independently perform surgeries at the hospital, bringing specialist expertise from India closer to patients in the region.

The collaboration will initially cover orthopaedics and urology, with specialists from Max Healthcare visiting CMC, Dubai for three days every month. The partnership is expected to expand to include additional specialists and clinical disciplines over time.

In addition to consultations, the visiting specialists will undertake robotic surgeries identified and shortlisted by the CMC, Dubai team. While Max Healthcare doctors will independently perform the surgeries at CMC, Dubai, the hospital's medical team will oversee pre and post-operative care, ensuring continuity of treatment for patients.

Max Healthcare brings to the partnership the expertise of its extensive network of hospitals and specialists in India. Its clinical capabilities span several super-specialities, including cancer care, cardiac sciences, neurosciences, orthopaedics, organ transplantation and robotic surgery, among others.

Going forward, the collaboration is expected to extend beyond visiting consultations and surgical services, with Max Healthcare also supporting CMC, Dubai in developing its transplant programme. This will create opportunities for a deeper clinical partnership between the two organisations and further strengthen access to specialised healthcare in the UAE.
